

Daniel Adedotun Taylor

DATA ANALYST // EXCEL, PYTHON, POWER BI & BUSINESS INTELLIGENCE

Lagos, Nigeria //

// adedotundaniel244@gmail.com // [LinkedIn](#)

Summary

Data analyst with four-plus years' experience owning the full analytical workflow across a nine-entity insurance and financial services group scoping business questions with stakeholders, writing the python queries to structure and validate the data, building the metric logic beneath the dashboards, and presenting findings to non-technical audiences up to Board level.

I developed the Group's HR Power BI and Microsoft Fabric reporting estate end to end, not just the visual layer: source reconciliation, semantic modelling, measure definitions and the data quality controls that keep them trustworthy. That work cut manual reporting turnaround by over 60%.

Comfortable working directly with business teams without escalation, documenting definitions and standards so others can use them, and training colleagues on the models I build. Currently undergoing a MSc in Data Science (Rome Business School).

Skills

Python for data manipulation & transformation process

Power BI & data modelling

& SQL (joins, CTEs, data transformation process, window functions)

Statistics & hypothesis testing

Data quality & validation

Stakeholder communication

Technical Skills

PYTHON & SQL: Joins • Subqueries • CTEs • Window functions • Aggregation • Validation and reconciliation queries • Multi-source extraction

Key Achievements

- Cut manual reporting turnaround by over 60% by rebuilding the Group's reporting layer in Power BI and Microsoft Fabric, replacing ad-hoc extraction with governed self-service dashboards.
- Own the metric definitions and semantic models behind reporting used by HR executives, management and the Board across nine entities.
- Delivered root cause and churn analysis supporting a measurable reduction in customer attrition and an increase in net promoter score across three companies.
- Designed the validation, reconciliation and exception-reporting framework underpinning data quality across all Group reporting.
- Analysed Group-wide survey data supporting a 70%+ response rate and a 90% engagement score.

Work History

Data Analyst — Team Lead, Reporting & Systems – Feb 2023 to Present

Leadway Group, Lagos

Lead the analytics and systems team serving six operating companies, with reporting coverage across nine Group entities in insurance, health, asset management, hospitality and property.

- Scope business questions directly with stakeholders across HR, Finance and Operations, then independently design the analysis, build the model and present findings most recurring requests resolved without escalation.
- Delivered the Group's Power BI and Microsoft Fabric HR dashboards in collaboration with the data transformation team: source reconciliation, semantic data modelling, DAX measure logic and access controls, not styling alone.
- Write complex python script using joins, CTEs, subqueries and window functions to extract, clean, structure and validate datasets across multiple source systems.
- Cut manual reporting turnaround by over 60% by replacing repeated extraction cycles with governed self-service reporting.
- Apply statistical analysis trend and cohort analysis, segmentation, benchmarking, correlation and scenario modelling to answer questions reporting alone cannot.
- Translate findings into clear narratives for non-technical stakeholders, including analysis used by the Board for compensation and workforce planning decisions.
- Built and documented the Group's data quality framework: validation rules, exception reports, reconciliation routines and correction tracking.
- Maintain data definitions, reporting standards and user guides, and onboard and train colleagues on the models and dashboards I build.
- Led user acceptance testing across all modules of a new enterprise platform — defining test cases, tracking defects and validating data migration across nine entities.
- Designed and analyzed the Group survey programme (2024 till now): instrument design, sampling, response monitoring and interpretation.

BI & Dashboards: Power BI (DAX, semantic modelling, row-level security) • Microsoft Fabric • Tableau • Metric logic and measure definition • Self-service design • Excel dashboards

Programming: Python (pandas, NumPy) • Power Query / M • Advanced Excel modelling

Statistics: Descriptive and inferential statistics • Distributions and correlation • Trend and cohort analysis • Segmentation • Hypothesis testing • Survey and sampling analysis

Data Modelling: Dimensional and semantic modelling • ETL and transformation • Cross-source reconciliation • Exception reporting • Data dictionary and documentation

Partnering: Independent scoping • Requirements gathering (CBAP®/CCBA® trained) • Data storytelling • Executive presentation • Training and onboarding

Domain: Customer experience analytics (NPS, CSAT, CLV, CES, SLA) • Workforce analytics • Compensation modelling • Insurance and financial services

Education

MSc, Data Science

Rome Business School — In Progress

Diploma, Data Science

AltSchool Africa

HND, Accounting

Federal Polytechnic Ede, Osun State

Certifications

- Microsoft Power BI Training — DexNova
- Business Analysis (CBAP®/CCBA®) — DexNova
- Scenario & Sensitivity Analysis — DBrown Consulting
- Power Query | Power Excel One — DBrown Consulting
- Data Visualisation: Storytelling — LinkedIn Learning
- Certified People Analytics Specialist — AIHR
- People Analytics Masterclass — Orgnostic
- Introduction to ESG — CFI

Customer Experience Data Analyst (Contract) — 2022 to Jan 2023

Leadway Group, Lagos

Owned the customer experience dataset for three Group companies.

- Defined and tracked customer experience metrics — NPS, CSAT, CLV, CES and SLA adherence through Power BI dashboards used daily by CX leadership.
- Conducted root cause and churn analysis producing a measurable reduction in customer attrition and an increase in net promoter score across three entities.
- Analysed structured and unstructured customer interaction data to identify friction across the customer journey.
- Partnered with CX and service teams to answer recurring questions and presented recommendations that informed service process redesign.

Analytics Consultant (Voluntary) — 2024 to Present

Kunbi Adeoti Consulting & Mentorship Academy, Lagos

- Conduct peer-to-peer compensation benchmarking analysis to support pay decisions for client organisations.
- Build pay structure and pay-for-performance models, including the analytical basis and documentation.
- Contribute quantitative analysis to strategic planning sessions with client leadership.

Finance Trainee — May 2017 to Aug 2017

Leadway Group, Lagos

- Reconciled bank statements and investigated financial discrepancies with the finance team.
- Processed premium, premium and internal payments and maintained compliant transaction records.
